

HTML5 and CSS3 Complete

Second Edition

Unit 0

Optimizing Your Website
for Search Engines

Objectives

- Understand search engine optimization (SEO)
- Write indexable content
- Add a description with the meta element
- Incorporate microdata

Objectives (continued)

- Create a sitemap file
- Create a robots.txt file
- Preview and finalize your site
- Submit your site

Understand Search Engine Optimization (SEO)

Unit 0

- Search engine optimization: process of tailoring the structure and content of a web page with search engines in mind

Understand Search Engine Optimization (SEO)

Unit 0

- Two main benefits:
 - Increasing site's priority in search results
 - Giving web applications useful semantic information about your site

What results if target key words?

- High probability of showing results for a particular search.
 - Meaning: To help your site to return the right results.
 - What if your web traffic going down?

...going down.

...need to use SEO

Ultimate Goal of SEO

Unit 0

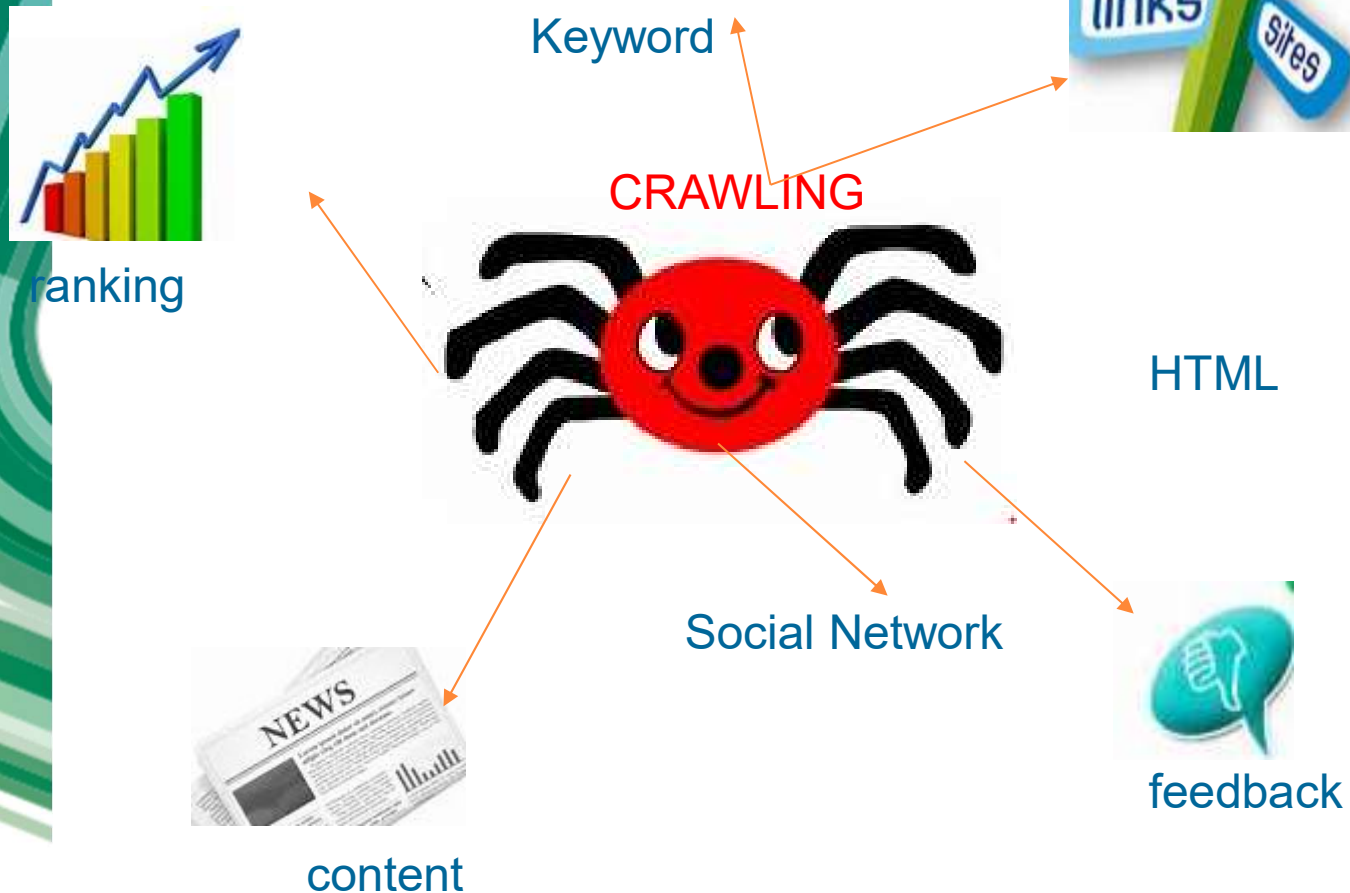

- Increase your site's usability
 - Brings people in from the search engine.
 - Site should be clearly defined.
 - Site meets expectations.

How does it work?

- Terminologies and concept to learn before knowing how it works.
 1. Processing – search string = indexed pages.
 2. Indexing – assign pages with particular keyword.
 3. Crawling - fetch sites' links
 4. Relevance – one or more results.
 5. Correct Results – get best match.

SEO/Search Engine Crawling – look for certain pieces of information.

....understand what GOOGLE, YAHOO, BING looking for...CHECK guidelines

SEO Techniques/Strategies

Unit 0

- Search Engine Optimization – find out how people are coming to your website.
 - Terms
 - Provide answers
 - Appealing to your audience
 - Think of popular keywords

Note: Incorporate these words to sites content.

More SEO Techniques/Strategies

- Link Building

- Link to your site appear on other sites.
- But it seems SPAMMY
- SO focus on content.

Note: It works in the past.

Ref: Link from
Webdigia.

Understand Search Engine Optimization (SEO) (continued)

Unit 0

- Algorithm: set of instructions through which search engines balance factors to decide priority of search results
- Google search engine wants the most relevant sites.

Unit 0

Understand Search Engine Optimization (SEO) (continued)

- Microdata: standard for using attributes to add more types of semantic data to web page content.
 - HTML tags tell the browser how to display the information included in the tag.
 - Example:

Thanks Giving Turkey or Turkey Pet

Microdata Continue:

Unit 0

Turkey stuffing

- Microdata elements uses schema tags
- Advantages of using microdata:
 - Give engine more context
 - Create rich snippets
 - Display more information about the results.

Easy Turkey Stuffing Recipe - BettyCrocker.com

<https://www.bettycrocker.com/...turkey-stuffing/380d2532-b381-4336-8...>

★★★★★ Rating: 3 - 27 votes - 20 min - 70 cal

Steps. In 10-inch skillet, melt butter over medium-high heat. Add onion, celery and carrots; cook, stirring occasionally, until tender. In large bowl, mix bread cubes, parsley, poultry seasoning, salt and pepper. Use to stuff 1 (14- to 18-lb) turkey.

Classic Turkey Stuffing Recipe - Genius Kitchen

www.geniuskitchen.com/.../betty-crockers-classic-bread-turkey-stuffing-...

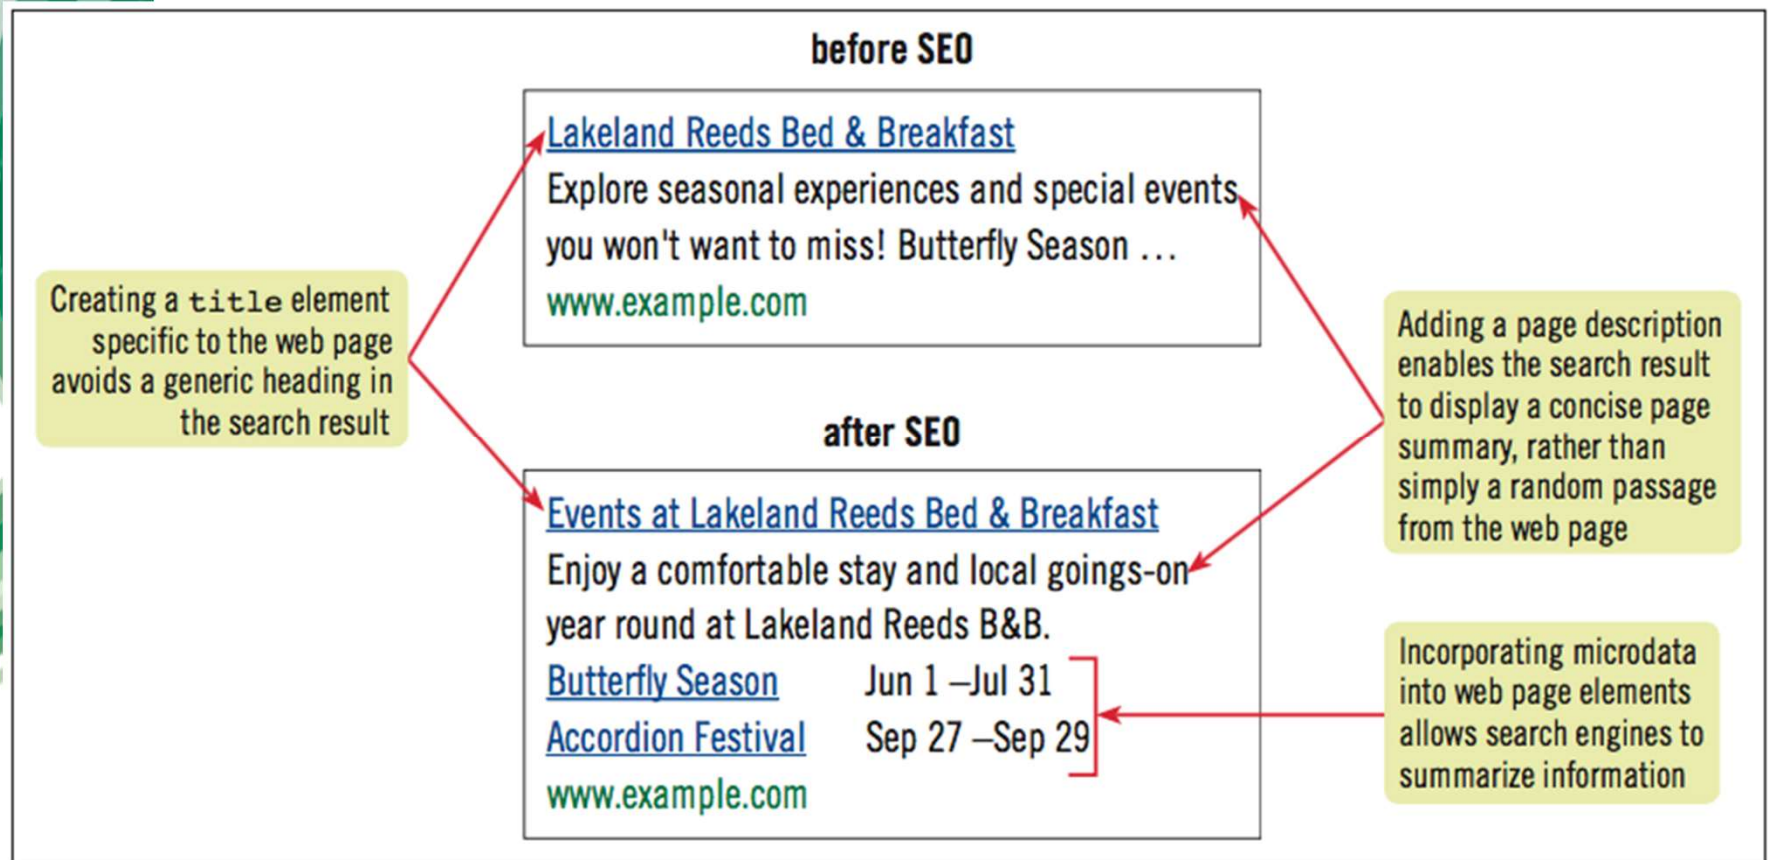

★★★★★ Rating: 5 - 46 reviews - 15 min - 1049.5 cal

Directions. In a large, heavy skillet over medium heat melt the butter, then sauté the onion and celery (and mushroom, if using) until the onion is soft, stirring occasionally. Stir in the salt, pepper, and sage and cook for an additional 3 minutes. Place the bread cubes into a large, deep bowl.

Understand Search Engine Optimization (SEO) (continued)

Unit 0

- Sample search results showing effects of SEO techniques:

Quick Quiz

Unit 0

- a. T/F: Search engines balance many factors, known as microdata, to decide the priority of search results.
- b. T/F: Search engines can use microdata to present and format relevant web page content in search results.

Write Indexable Content

Unit 0

- To make website search engine friendly depends on the content
 - Even small adjustments can improve accuracy of indexing
 - `title`, headings, `img`, and linked text play important roles

Write Indexable Content (continued)

- Guidelines for creating indexable content:

element(s)	do	don't
title	create short, descriptive titles customize the title text to accurately describe the current page	use generic or long titles copy the same title text for every page in a website
h1-h6	add headings to major subdivisions of the page	mark text with a heading element merely for visual formatting
img	give image files short, descriptive names supply alternative text using the alt attribute	give image files long or nondescriptive names include text in images that's not available elsewhere on the page
a	make links concise use text that describes the link target	add links to long sections of text link generic text such as <i>click here</i>

Indexable content continue: To make visible to search engine crawlers.

- Provide “alt” text for images.
- Supplement search boxes
- Flash/Java plug-ins with text on the page
- Transcript for video/audio content

Quick Quiz

- T/F: You should use generic or long titles in a title element to create ideal indexable content.
- T/F: you should not mark text with a heading element merely for visual formatting.

Add a Description with the meta Element

- Code added to provide information specifically for search engines
- Page summary using `meta` element
 - Use `name` attribute with value of `description`
 - `content` attribute value is description of site

Add a Description with the meta Element (continued)

- Code for description meta element

```
1  <!DOCTYPE html>
2  <html lang="en">
3    <head>
4      <title>Room selection at Lakeland Reeds Bed & Breakfast</title>
5      <!--
6        Lakeland Reeds Bed & Breakfast Rooms page
7        Filename: rooms.html
8
9        Author:
10       Date:
11       HTML5 and CSS3 Illustrated Unit 0, Lessons
12     -->
13     <meta charset="utf-8">
14     <meta name="viewport" content="width=device-width">
15     <meta name="description" content="Lakeland Reeds Bed & Breakfast offers 4
16     comfortable rooms that accommodate from 2 to 5 people. All have private baths and
17     views of Twin Lakes.">
18     <script src="modernizr.custom.40753.js"></script>
```

Meta Element: a list of words or terms that describe the page content, separated by commas

Quick Quiz

Unit 0

- T/F You can add a summary of your page content by creating a new meta element with the description value for the name attribute.
- T/F Like the meta element for indicating the character encoding of a web page, which uses the charset attribute, you specify a description using a single attribute.

Incorporate Microdata

- Vocabularies: sets of terms and definitions used to indicate semantic value of specific types of info
 - Anyone can define and use custom vocabulary
 - Most widely supported is schema.org
 - Schemas: groups of terms and definitions related to different types of information

Click to edit Master title style

- Vocabularies: define keyword values for specific types of information
 - Serve as common language for referencing data
 - Anyone can define and use custom vocabulary
 - Reference in code using URI
 - Data-vocabulary.org contains popular, widely used vocabularies

Common used vocabularies

Unit 0

- Creative works: `CreativeWork`, `Book`, `Movie`, `MusicRecording`, `Recipe`, `TVSeries`
- Embedded non-text objects: `AudioObject`, `ImageObject`, `VideoObject`
- `Event`
- `Health and medical types`: Notes on the health and medical types under `MedicalEntity`
- `Organization`
- `Person`
- `Place`, `LocalBusiness`, `Restaurant`
- `Product`, `Offer`, `AggregateOffer`
- `Review`, `AggregateRating`
- `Action`
- `Thing`
- `Intangible`

Incorporate Microdata (continued)

- Code for microdata in footer section

```
103 <footer itemtype="http://schema.org/LocalBusiness" itemscope>
104   <span itemprop="name">Lakeland Reeds Bed & Breakfast</span> &bull;
105   <span itemprop="address" itemtype="http://schema.org/PostalAddress" itemscope>
106     <span itemprop="streetAddress">45 Marsh Grass Ln.</span> &bull;
107     <span itemprop="addressLocality">Marble</span>,
108     <span itemprop="addressRegion">MN</span>
109     <span itemprop="postalCode">55764</span>
110   </span>&bull;
111   <span itemprop="telephone">(218) 555-5253</span>
112 </footer>
```

The business name, address, and phone number are marked with properties from the LocalBusiness schema

The parts of the address are marked with properties from the PostalAddress schema

Note: Specify how this bits of data relate to each other as shown below, the search engine will be able to better understand your page

Structured Data Testing Tool

Unit 0

Pasted code (your line wrapping may differ)

Validate button

The screenshot shows the Google Developers Structured Data Testing Tool interface. The browser address bar shows the URL <https://developers.google.com/structured-data/testing-tool/>. The page title is "Structured Data Testing Tool". The interface is divided into two main sections: a code editor on the left and a results panel on the right.

In the code editor, there is a "Fetch URL" button, a "Validate" button, and a "VALIDATE" button. The code being tested is a JSON-LD snippet for a LocalBusiness:

```
1 <footer itemscope
2 itemtype="http://schema.org/LocalBusiness">
3   <span itemprop="name">Lakeland Reeds Bed & Breakfast</span> &bull;
4   <span itemprop="address" itemscope
5     itemtype="http://schema.org/PostalAddress">
6     <span itemprop="streetAddress">45 Marsh Grass Ln.
7     </span> &bull;
8     <span itemprop="addressLocality">Marble</span>,
9     <span itemprop="addressRegion">MN</span>
10    <span itemprop="postalCode">55764</span>
11    </span> &bull;
12    <span itemprop="telephone">(218) 555-5253</span>
13  </span>
14 </footer>
```

The results panel shows "Results - Filter by use case". It indicates "All good" with a green checkmark. Below this, there is a table listing the properties of the LocalBusiness:

LocalBusiness	
name:	Lakeland Reeds Bed & Breakfast
telephone:	(218) 555-5253
address [PostalAddress]:	
streetAddress:	45 Marsh Grass Ln.
addressLocality:	Marble
addressRegion:	MN
postalCode:	55764

At the bottom of the results panel, there is a section for "Custom Search Result Filters".

The green check mark indicates that the code does not contain errors

This table lists the properties your code is marked with on the left and the content marked by each property on the right

Create a Sitemap File

Unit 0

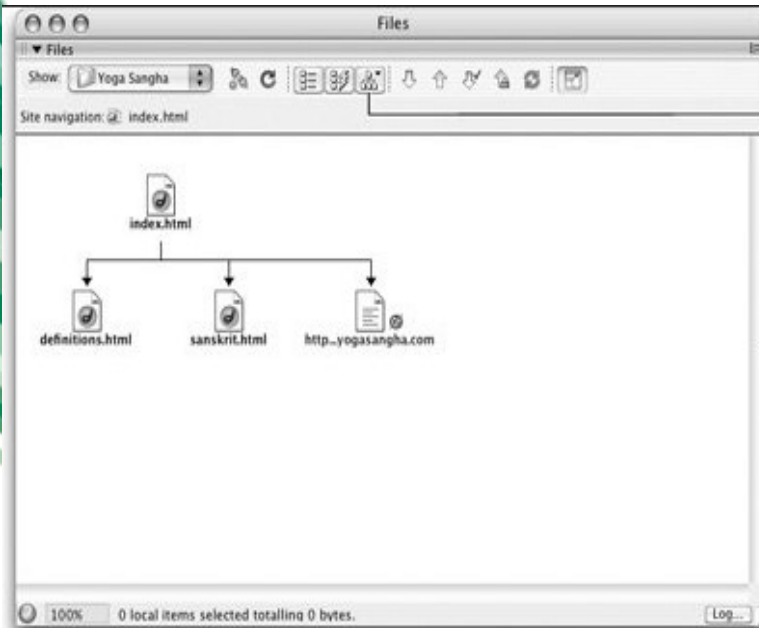

- Making relationships between pages on site understandable is important
 - Site should be navigable
 - Search indexes should search all pages on the site
- Sitemap: file in a specific format that lists all the pages available to users in a web site
 - May include information about content

Does sitemap really matter?

Unit 0

Reasons of creating:

It can improve crawling...sitemap helps your SEO in the way it helps search engines to find faster your website and make better crawl for indexing.

Site Map
button

Can use Dreamweaver as visual tool to create sitemap or you can use any other tools.

Create a Sitemap File (sitemap.txt) - guidelines

● Content of plain-text sitemap file

```
1 http://www.example.com/index.html
2 http://www.example.com/aboutus.html
3 http://www.example.com/rooms.html
4 http://www.example.com/reserve.html
```

- The text file must have one URL per line. The URLs cannot contain embedded new lines.
- You must fully specify URLs, including the http.
- Each text file can contain a maximum of 50,000 URLs and must be no larger than 50MB (52,428,800 bytes). If you site includes more than 50,000 URLs, you can separate the list into multiple text files and add each one separately.
- The text file must use UTF-8 encoding. You can specify this when you save the file (for instance, in Notepad, this is listed in the Encoding menu of the Save As dialog box).
- The text file should contain no information other than the list of URLs.
- The text file should contain no header or footer information.
- If you would like, you may compress your Sitemap text file using gzip to reduce your bandwidth requirement.
- You can name the text file anything you wish. Please check to make sure that your URLs follow the [RFC-3986](#) standard for URIs, the [RFC-3987](#) standard for IRIs
- You should upload the text file to the highest-level directory you want search engines to crawl and make sure that you don't list URLs in the text file that are located in a higher-level directory.

Creating sitemap using XML (sitemap.xml).

Unit 0

```
1 <?xml version="1.0" encoding="UTF-8"?>
2 <urlset
3     xmlns="http://www.sitemaps.org/schemas/sitemap/0.9"
4     xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
5     xsi:schemaLocation="http://www.sitemaps.org/schemas/sitemap/0.9
6         http://www.sitemaps.org/schemas/sitemap/0.9/sitemap.xsd">
7
8     <url>
9         <loc>http://example.com/</loc>
10        <lastmod>2018-10-06T01:39:16+00:00</lastmod>
11    </url>
12    <url>
13        <loc>http://example.com/compatibility.html</loc>
14        <lastmod>2019-03-18T10:53:03+00:00</lastmod>
15    </url>
16    <url>
17        <loc>http://example.com/blog/</loc>
18        <lastmod>2019-04-06T16:35:05+00:00</lastmod>
19    </url>
20    <url>
21        <loc>http://example.com/mobile/</loc>
22        <lastmod>2019-02-17T19:09:25+00:00</lastmod>
23    </url>
24    <url>
25        <loc>http://example.com/about/</loc>
26        <lastmod>2019-01-13T22:33:35+00:00</lastmod>
27    </url>
28    <url>
29        <loc>http://example.com/blog/index.html</loc>
30        <lastmod>2019-04-06T16:35:05+00:00</lastmod>
31    </url>
32    <url>
33        <loc>http://example.com/sitemap.html</loc>
```

- This document describes the XML schema for the Sitemap protocol.
- Sitemap protocol – XML tags.
- file – UTF-8 encoded.
- <urlset> must be opening tag
- <url> parent URL tag
- <loc> child entry of url parent tag.
- The rest of the tags are optional

+PUT this public folder right after web, www, or public_html.

+Put sitemap.xml on root folder and submit in all search engines that helps to index pages.

+References:

<https://www.sitemaps.org/protocol.html>

Quick Quiz:

A sitemap file cannot include information about content such as images or video in the pages in a web site. (T/F)

Create a robots.txt File (REP) Robots Exclusion Protocol.

- Bots (crawlers): programs that search engines use to index web pages
 - Look for files named robots.txt
 - Cannot rely on this file to keep a document hidden
 - May use password-based system
 - Influences which pages are indexed

Robots.txt example:

Basic format:

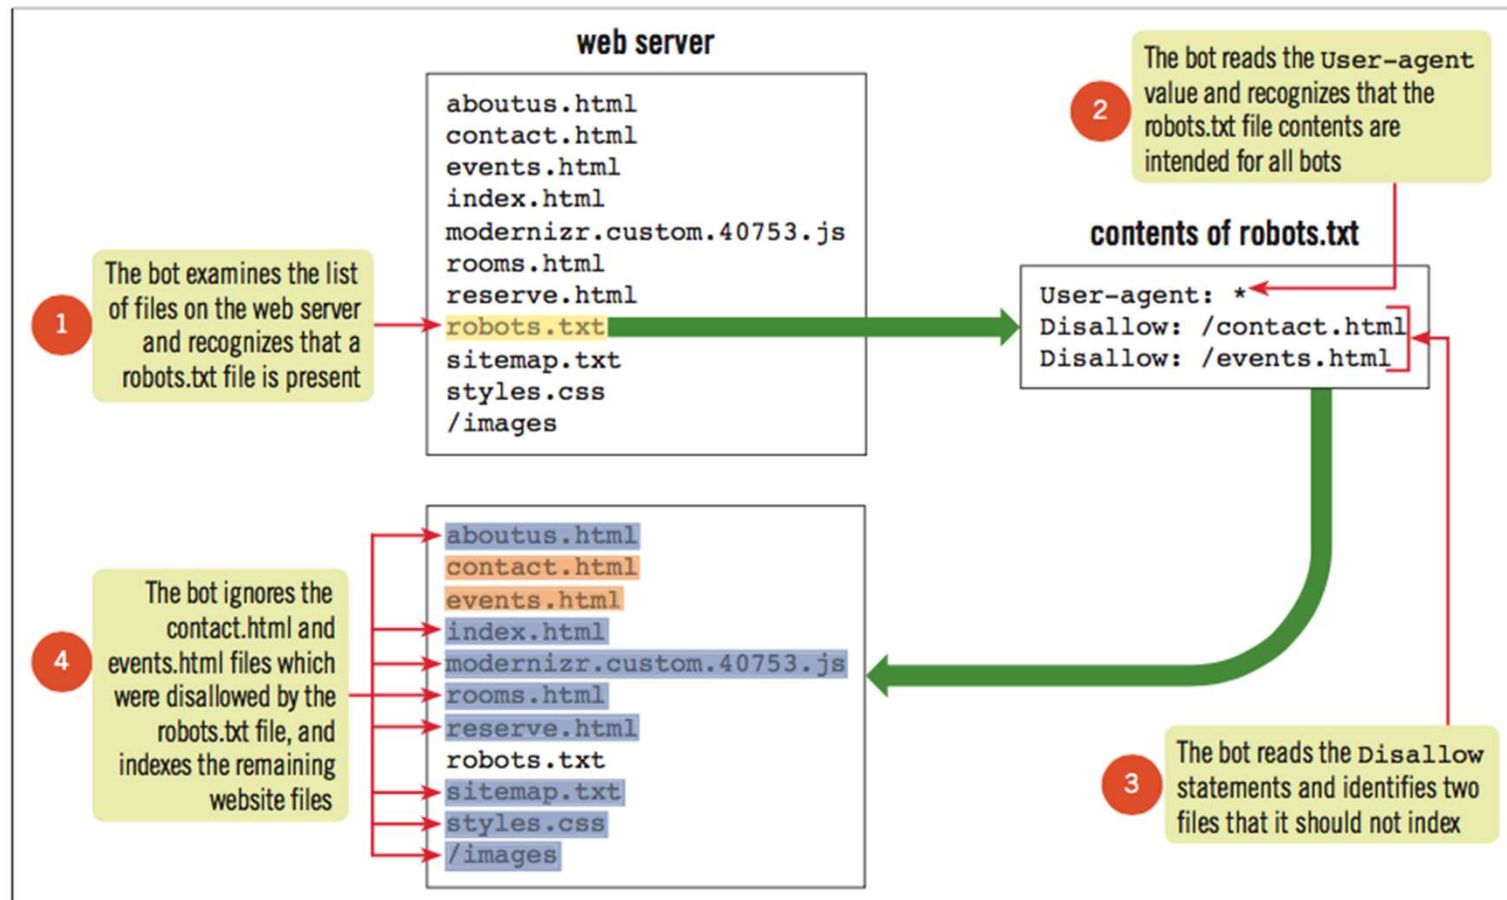

```
User-agent: [user-agent name]
```

```
Disallow: [URL string not to be crawled]
```

```
1 User-agent: *  
2 Disallow: /contact.html  
3 Disallow: /events.html
```

Create a robots.txt File (continued)

- How a bot uses a robots.txt file

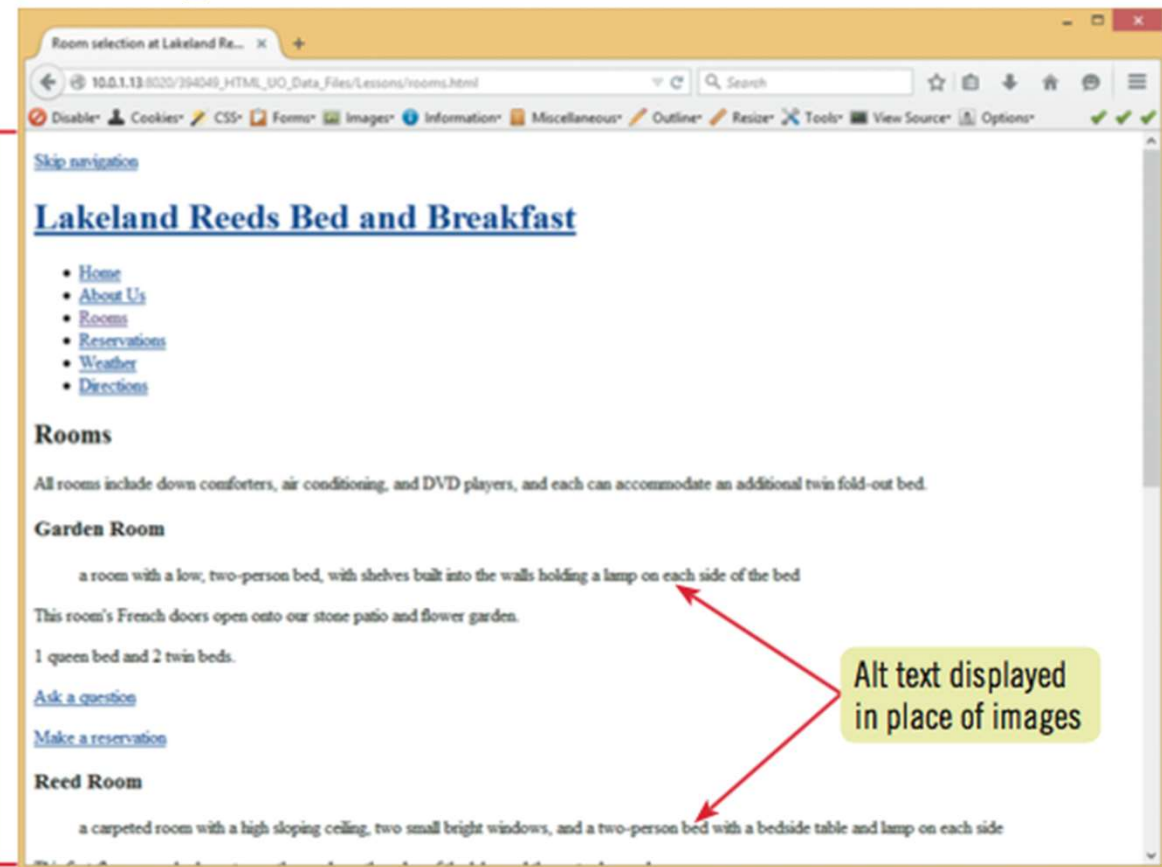

Preview and Finalize Your Site

- Useful to give documents final check from bot point of view
 - Helps identify missing or hidden content
 - Ensures that pages are ready for indexing
 - Can install free programs to view only text
 - Can approximate view by changing browser settings

Previewing and Finalizing Your Site (continued)

- Part of rooms.html displayed without images or styles

Elements displayed without the style sheet, using only the default styling applied by the browser

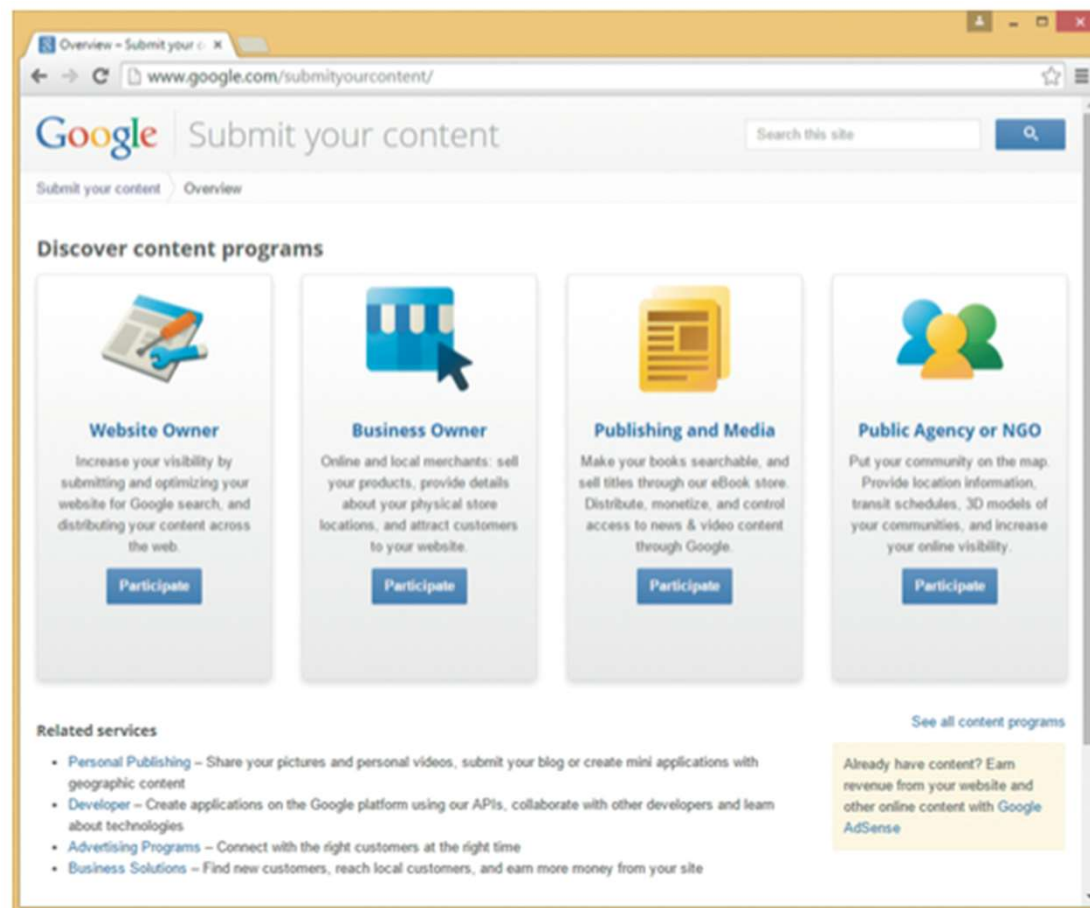

Submit Your Site

Unit 0

- Webmasters: people in charge of websites
- Web site can be simply published to make it available to potential users and bots
- Other measures can be taken to increase page popularity
 - Submit page directly to search engines

Submitting Your Site (continued)

- Submit your content page at <https://support.google.com/webmasters/answer/6259634?hl=en>

Summary

- SEO tailors your website with search engines in mind to increase site popularity and give applications useful information about your site
- It does not take much to make a site more SEO friendly
 - Indexable content element changes are easy

Summary (continued)

- Vocabularies define keyword values for specific types of information
- Sitemap file contains list of all pages of a website
- Bots are used by search engines to target indexable information
- robots.txt file influences which website pages are indexed by search engines

Summary (continued)

Unit 0

- View site from bot point of view to finalize
- Submit site directly to search engines
