

LAB 4: Layout

Introduction

You're assigned as a web developer of your team and your company hired a web designer. The web designer drew a template for you to follow. Your job is to code the design using CSS. The name of the CSS is *stylelab.css*. *An html (eatwell.html) content is provided for you already—you don't have to change it. The only thing you have to change is the stylelab.css.* It is a challenge but it's easy to code if you understand the layout.

Requirements:

1. The background of the body is silver.
2. The background of the header is olive. 3. The color of the header is floralwhite.
4. The background of the article is floralwhite.
5. Modify the style_lab.css (ONLY the properties and values should be added. Don't change anything.) to reflect the image below. It does not have to be perfect, but give the best you can.

Here is the code I write to add the css file:

```
/*
    Eating Well in Season style sheet
    Filename: style_lab.css

    Author: Your Name
    Date: Date
*/

/* reset styles */
article, body, div, footer, header, h1, h2, p {
    border: 0;
    padding: 0;
    margin: 0;
}

/* body and page container */
body {
    background-color: silver;
}

.container {
    /* max-width: 1000px;*/
}
```

```

}

/* headings */
header {
    background-color: olive;
    color: floralwhite;
    text-align: left;
}

/* position container */
.positioncontainer {

}

/* main content */
article {
    background-color: floralwhite;
    float: left;
    clear: left;
}

article h2 {
    background-color: lightskyblue;
    padding-top: 10px;
    padding-bottom: 10px;
}

/* sidebar */
aside {
    color: black;
    text-align: left;
    background-color: gold;
    padding-bottom: 26px;
}

/* footer section */
footer {
    background-color: olive;
    color: floralwhite;
    text-align: right;
    clear: both;
}

```

After the file is deployed to ITU server, I am able to browse it using the link:

<http://dblab.itu.edu:82/xhuand93887/Lab4/Lab4.html>
